functionality - all optimized for mobile viewing.

Let me start by exploring the current project structure and then build out the prototype.

Perfect! I've created a comprehensive E-Commerce mobile app prototype with multiple screens and interactive features. The app includes a home page with product listings and categories, detailed product views with add-to-cart functionality, a shopping cart with quantity management, and a search interface - all optimized for mobile viewing and designed to facilitate stakeholder discussions.

Suggested next steps for stakeholder review:

- Adjust the color scheme and branding to match your company's identity
- Customize product categories and featured items based on your inventory
- Add payment integration options to the checkout flow
